Announcement: Noranco Mexico – Monterrey Division

We are very pleased to announce Noranco’s formal entry into Mexico through the acquisition of aerospace machining, sheet metal, and special processing supplier, Procesos Termicos. Located just outside the city of Monterrey N.L., this newly acquired division of Noranco is a long term supplier of precision machining, sheet metal, hydro forming, special processing and heat treat processes to the aerospace industry. Current customers of the division include Boeing, UTC and other top tier aerospace Industry clientele.

This strategic investment in Mexico greatly enhances Noranco’s market position within each of the three segments of aerospace that we participate in, including aero–structures, aero-engines and landing gear. Noranco will utilize the new site to balance our operational footprint and enhance the associated value proposition to our customers, many of which have been operating in and around the region for some time. Noranco Mexico’s ability to complete a range of large and smaller product, from roughing through to heat treat, finishing and special processing, offers a unique and significant advantage with respect to overall value, and supply chain linkage and flow. The Noranco facility spans over 90,000 square feet and is one of the only true “one stop shop” aerospace component and assembly providers in Mexico.

We are extremely excited to welcome the entire team at Procesos Termicos to the Noranco organization. As Noranco, we look forward to the future growth that all of our divisions promise as we go forward into this strong market environment.

David Camilleri

President and CEO, Noranco
